The Ballarat Energy Storage System provides back-up power and grid stabilisation, vital to maintaining a reliable and affordable energy supply in Western Victoria.

This guidance report has been commissioned by the Australian Energy Council to initiate and facilitate collaboration amongst its member organisations towards a harmonised leading practice approach for ...

A review of existing storage technologies for short to medium-term storage (such as flywheels, batteries, and supercapacitors) reveal that hybrid systems with different power, energy ...

These projects have demonstrated the ability of grid-forming BESS to remain stable under weak grid conditions and damp voltage oscillations following disturbances, and further knowledge sharing from ...

Australia has a massive pipeline of grid-scale battery energy storage projects. 16.5 GW of new battery projects could arrive in the NEM in the next 3 years.

This fact sheet contains information relevant to parties seeking to connect battery energy storage systems (BESS) with grid-forming inverter capabilities within the National Electricity Market ...

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small ...

Find out how grid-scale battery energy storage works, the community benefits and pre-deployment considerations.
