Western professor Joshua Pearce collaborated with professional shepherd Rafael Lara on a study that shows the profitability of "solar" sheep, raised specifically to trim grass and weeds under ...

Farmers are embracing a new trend called agrivoltaics. This innovative practice combines solar panels with raising animals or crops in the same area. In the U.S., thousands of sheep now graze under ...

The Montgomery Sheep Farm (originally known as the Montgomery Solar Farm) was built in 2015, and it's added sheep to its operation to cut back on mowing under and around the solar panels.

Atmos explained that the Grays' sheep graze on roughly 4,000 acres of land co-located with solar energy sites, and the family earns additional income by charging grazing fees to the solar ...

Learn how solar grazing with sheep is revolutionizing vegetation management at solar farms while preserving agricultural land.

Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy -- and offers high incomes in the process.

What if the key to tougher wool, cluckier sheep, and reduced farm expenses lay in the shade beneath solar panels?

When solar farms use sheep instead of mowers for vegetation management, they minimize burning fossil fuels, and costs associated with labor are also reduced.
