Let's face it - Europe's energy transition is hitting speed bumps. The continent needs 112 GWh of new battery storage by 2030 to meet its renewable targets [10], but local manufacturers can't keep up. ...

Under the partnership, Schroders Greencoat will bring its energy transition and infrastructure investment expertise to the platform. The deal also supports CATL's international ...

Schroders Greencoat has today signed a strategic memorandum of understanding (MoU) with Contemporary Amperex Technology Co Ltd (CATL), a globally leading China-based battery ...

Battery use is also growing in emerging market and developing economies outside China, including in Africa, where close to 400 million people gain access through decentralised solutions such as solar ...

The deal also supports CATL's international expansion following its Hong Kong listing in 2025. Schroders Greencoat manages renewable infrastructure assets across Europe and globally, ...

Note: Required spread for a two-hour battery project assuming revenues cover costs of just capex of EUR360,000/MWh. Assumes 90% round-trip efficiency, 85% depth of discharge and an average of 1.5 ...

In this Q& A, Carbon Brief explores how China has been driving the sector forwards and how it fits into the nation's wider energy transition. Soaring battery deployment China is currently the ...

Ahead and heading into a new era for new energy, it is expected that China's energy storage capacity and its BESS capacity in particular will grow at a CAGR rate of 44% between 2023 and 2027.
