How many batteries does a communication base station use?

Each communication base station uses a set of 200Ah·48V batteries. The initial capacity residual coefficient of the standby battery is 0.7, and the discharge depth is 0.3. When the mains power input is interrupted, the backup battery is used to ensure the uninterrupted operation of communication devices.

What is base station energy storage battery schedulable capacity?

Base station energy storage battery schedulable capacity Spare battery capacity is divided into two types, which vary with load. The first type is the reserve capacity reserved to maintain availability. The second type is the schedulable capacity that can be transmitted to the grid.

How does the power load of a 5G base station affect communication load?

Therefore, the variation of the power load of the 5G base station is closely related to the communication load. It is divided into two kinds of structure, the one that doesn't change is the first structure, such as lighting and air conditioning load; due to the communication load. The second structure of the power load is proportional to the flow.
