How much electricity does Costa Rica use per year?

of electric energy per year. Per capita this is an average of 1,904 kWh. Costa Rica could be self-sufficient with domestically produced energy. The total production of all electric energy producing facilities is eleven bn kWh, which is 110 percent of the country's own usage. Despite this, Costa Rica trades energy with foreign countries.

What is Costa Rica's energy policy?

of total final consumption of total final consumption of electricity Costa Rica's energy policy aims to move from a fossil fuels based energy system towards renewable energy sources and to expand its power generation capacity, replacing old power generating stations and developing new projects.

How can Costa Rica increase low-carbon electricity generation?

To increase low-carbon electricity generation, Costa Rica could consider expanding its exploration and use of solar and nuclear energy, both of which offer immense potential for sustainable growth. Solar energy, with its ability to complement hydropower during dry seasons, represents an abundant and underutilized resource.

What makes Costa Rica a sustainable country?

This achievement underscores the nation's commitment to sustainable and green energy. Hydropower is the dominant source, providing approximately two-thirds of the country's electricity, while geothermal energy contributes nearly 12%. Wind energy is also a significant part of Costa Rica's energy mix, amounting to almost 10%.

Costa Rica could be self-sufficient with domestically produced energy. The total production of all electric energy producing facilities is twelve bn kWh, which is 118 percent of the country's own usage.

Costa Rica CR: Electric Power Consumption: per Capita data is updated yearly, averaging 1,843.319 kWh (Median) from Dec 1990 to 2023, with 34 observations. The data reached an all-time high of ...

NOTE: This time series graph shows the Electricity Consumption of Costa Rica based on our stored data from 2004 to 2024, taken from the CIA World fact books of the respective years.

Electricity generation and consumption, imports and exports, nuclear, renewable and non-renewable (fossil fuels) energy, hydroelectric, geothermal, wind, solar energy, etc. in Costa Rica.

Chart and table showing yearly production and consumption of electricity by country (Costa Rica). Data

obtained from the US Energy Information Administration.

Hydropower is the dominant source, providing approximately two-thirds of the country's electricity, while geothermal energy contributes nearly 12%. Wind energy is also a significant part of ...

Today, transport alone accounts for more than half of final energy consumption. In the STEPS, total final energy consumption increases by 50% by 2050, mainly driven by increased ...

Growth in electricity demand has slowed down or even reversed in many advanced economies due to energy efficiency efforts and the shift towards less energy-intensive forms of ...
