Could Cyprus become a key location for data centres?

Cyprus has the potential to become a key location for data centres, according to Andreas Poullikkas, an expert in energy systems and former chairman of the Cyprus Energy Regulatory Authority (CERA). However, he stressed that careful planning is required to address the high energy demands of such facilities. In his...

How many colocation data centers are there in Cyprus?

Currently there are 17 colocation data centers from 7 areas in Cyprus (Republic of Cyprus). Save the trouble of contacting the providers, check out our quote service. of this country to an area map or data center map via the menu in the right side. Need services in Cyprus?

Why are data centres consuming more electricity?

"The electricity consumption of data centres is constantly increasing due to the global demand for cloud services, big data, and artificial intelligence," he said. He mentioned that "major technology companies such as Google, Microsoft, and Amazon are investing heavily in renewable energy to reduce their carbon footprint".

The government plans to complete a new energy storage system, along with storage installations at two Electricity Authority of Cyprus (EAC) power plants, by June 2026, Government ...

Wenergy, as a leading energy technology brand, has developed the Stary Series 192 Battery Energy Storage System (BESS) specifically designed to address the pain points of the Cyprus...

The Cyprus Department of the Environment has approved the construction and operation of a modern energy storage facility with a capacity of 59 MW and a storage capacity of 120 MWh in the Psevd&#225;s ...

The initiative aims to transform the traditionally high energy consumption of data centres into an advantage for the national power grid by functioning as an indirect energy storage ...

Data centres typically require substantial energy to operate vast compute and storage platforms. However, by leveraging the excess energy generated by Cyprus"s solar capabilities, this ...

Future-proofing a data center requires careful consideration of energy sources, heat utilization, and reliable green energy storage. We develop customized solutions for data ...

Cyprus has the potential to become a key location for data centres, according to Andreas Poullikkas, an expert

in energy systems and former chairman of the Cyprus Energy Regulatory...

By June 2026 at the latest, the distributed energy storage system with a total capacity of 120 MW, which is currently being implemented, will be operational and will function with full ...
