Here we assess the deployable potential of RPV across 367 Chinese cities by incorporating variations in building types, regional characteristics and policy limitations.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic solar capacity to reach its climate target...

The country added 120 gigawatts of utility-scale solar projects, exceeding the 96.3 gigawatts of new distributed capacity, which are mainly on the rooftops of homes and office buildings, ...

OverviewGovernment incentivesHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryThe China Development Bank provided \$20 billion of financing to domestic solar manufacturers in 2010. In 2011, new feed-in tariffs were promised to potential solar power developers to help drive investments and growth in the solar power market. The government of Qinghai province offered solar projects that were operational before 30 September, 1.15 yuan (\$0.18) for each kWh they produced in May 2011. The National Development and Reform Commission offered same-priced subsidies to potential solar powe...

Understanding energy storage is crucial for grasping the future of energy in China. In this guide, readers will explore the various types of energy storage technologies currently in use, ...

Ultimately, it is concluded that several classic BIPV building cases have achieved essentially 100% net-zero energy operation and maintenance with significant reductions in CO2 ...

The results show that currently the photovoltaic power generation technology is relatively mature and widely applied, and passive photovoltaic technology can play a greater role in reducing ...
