Ever wonder why almost all solar panels are made of silicon? It's not the only material that can turn sunlight into electricity, but it's definitely the star player.

You know what M.D. means, but what does D.O. mean? What's different and what's alike between these two kinds of health care providers?

Arthritis is a leading cause of pain and limited mobility worldwide. There's plenty of advice on managing arthritis and similar conditions with exercise, medicines and stress ...

Silicon is, by far, the most common semiconductor material used in solar cells, representing approximately 95% of the modules sold today. It is also the second most abundant material on Earth ...

Brain MRI is one of the tests you may have to determine the cause of headaches, dizziness, seizures, vision problems or hearing loss. This painless imaging test is used to ...

Compared with a healthy liver (top), a fatty liver (bottom) appears bigger and discolored. Tissue samples show extra fat in fatty liver disease, while inflammation and ...

Polysilicon, made from silicon metal, is the key material used to make solar cells. This is because its semiconducting properties allow it to convert sunlight into electricity (i.e. the photovoltaic ...

Most panels on the market are made of monocrystalline, ...
