Repurposing spent batteries in communication base stations (CBSs) is a promising option to dispose massive spent lithium-ion batteries (LIBs) from electric vehicles (EVs), yet the ...

Especially in long-life applications, cost-effective design strategies, including the use of durable memory components, can help mitigate electronic waste concerns while ensuring that ...

The telecom industry faces significant challenges in addressing e-waste and sustainability concerns. This article explores innovative strategies and solutions to tackle these issues head-on.

These steps consist of guidance on developing an e-waste inventory, approaches to design e-waste prevention and reduction programmes and the supportive measures required for successfully ...

Repurposing spent batteries in communication base stations (CBSs) is a promising option to dispose massive spent lithium-ion batteries (LIBs) from electric vehicles (EVs), yet the environmental ...

1: Reuse and recycling pathways considering economic and environmental functions. Our method encompasses the system boundaries of the lithium-ion battery life cycle, namely, cradle-to-grave, ...

As global 5G infrastructure grows by 19% annually, communication base station battery disposal emerges as a critical yet overlooked challenge. Did you know each 5G base station requires 3-5 ...

In a technologically progressed world, electronic waste (E-waste)/waste electrical and electronic equipment (WEEE) has become an emerging concern and is in need of urgent attention.
