Should El Salvador prioritize renewables?

Prioritizing renewables is of utmost priority to El Salvador from an energy security basis, as they do not have any domestic oil, gas or coal supply and are dependent on imported fossil fuels from their partners.

Does El Salvador have electricity?

In 1995, only 65.5% of the population in El Salvador had access to electricity. Currently, the electrification index is 83.4%. This coverage is higher than that in Guatemala (83.1%), Honduras (71.2%) and Nicaragua (55%) but lower than the one for Costa Rica (98.3%) and Panama (87.1%) and also below the 94.6 average for LAC.

Does El Salvador have a capacity to conduct renewable projects?

El Salvador has the national, political will to conduct renewable projects, as evidenced by the numerous incentives provided, the dire climate risks in the country, and their regional partnerships. While the institutional capacity is still catching up, to say they don't have any capacity would be false.

Is El Salvador losing electricity?

On the topic of electricity, World Bank last collected El Salvador's transmission loss in 2011 at 11%, which has shown a steady decrease over the past several decades, indicating greater infrastructure and procedural efficiency.

The National Energy Policy of El Salvador establishes the government guidelines on long-term energy planning, access to energy, efficient consumption, clean and renewable energy, fossil fuels, biofuels, ...

El Salvador's President, Nayib Bukele, has announced an exceptional measure for January 2025: the government will cover electricity and water bills for 95% of Salvadoran households.
