With its robust features and streamlined workflow, our Automatic Electrolyte Filling Machine is the ideal solution for manufacturers seeking to enhance production capacity, improve product quality, and ...

Our novel technology for electrolyte filling does not require a dry room and also enables a quick and optimal wetting. The innovative concept offers great potential for saving energy, materials and costs ...

This equipment uses a high-precision filling system, with adjustable filling volumes, ensuring even distribution of the electrolyte within the cell, which improves battery performance and lifespan.

We design and manufacture LPG filling systems that work for everyone: from simple, manual machines to advanced, fully automatic electronic solutions.

At the heart of this process is the cylindrical lithium battery filling machine - a game-changer for manufacturers aiming to improve efficiency and safety. Let's explore how this technology is ...

After installing Jiangsu ERIC's fully automated filling line, our production capacity doubled with the same workforce. The rotary filling system handles 300 bottles per minute with no spillage or foaming issues.

At BESS, we are committed to accelerating the global transition toward clean energy by providing cutting-edge solutions for battery production, efficient recycling, and sustainable materials recovery.

By utilizing the soft-packed auto battery filling machine, factories can not only enhance production efficiency but also reduce production costs.
