Compared with the global benchmark of around 4% reductions per year needed to align with net-zero by mid-century, Eritrea's recent trajectory is not yet declining at that pace.

Although Eritrea contributes less than 0.01% of global cumulative greenhouse gas emissions, it disproportionately suffers the impacts of climate change, particularly through severe and ...

The government of Eritrea is committed to reduce the CO₂ emissions from fossil fuels by 4.2% in 2020, 6.2% by 2025 and 12.0% by 2030 compared to the projected BAU of the reference year of 2010.

Eritrea submitted its first Nationally Determined Contribution (NDC) to the UNFCCC in 2018, committing to reduce CO₂ emissions from fossil fuels by 12% by 2030 compared to 2010 levels.

The Eritrean government has established a robust framework aimed at reducing greenhouse gas emissions, recognizing the critical need for environmental sustainability as part of its ...

Through its NDC, the government of Eritrea is committed to reduce the CO₂ emissions from fossil fuels by 12.0% by 2030 compared to the projected BAU scenario of the reference year of 2010. If ...

Explore the transformative impact of the Eritrea Community Boreholes Project, which not only reduces carbon emissions but also ensures access to safe water, supports local communities, ...

Overview Mitigation and Adaptation Strategies Climatology Climate Change Impacts See also Eritrea has implemented several policies and legal frameworks to contribute to both the adaptation and mitigation of climate change. The country has made significant strides in incorporating climate change considerations into its national development policy framework. Eritrea has already taken proactive measures to integrate climate change mitigation issues into sectoral policies, such as through the Energy Development Framework and Strategy (EDFS). In 2007, Eritrea launched its National Climate ...
