From mobile command post design, to equipment, shipping logistics, and installation, our team is equipped to handle all your military shelter requirements. Tell us your needs and we'll work with you ...

Existing methods for emergency mobile energy storage (EMES) allocation often struggle to balance resilience enhancement and economic feasibility under large-scale disasters effectively.

The primary advantage that mobile energy storage offers over stationary energy storage is flexibility. MESSs can be re-located to respond to changing grid conditions, serving different applications as the ...

Nordic Shelter also manufactures sandwich panels for our shelters and container by ourselves, enabling us to meet the toughest climate requirements. Some of our container and shelter variants are ...

Discover our energy storage shipping containers designed for safe, scalable, and efficient power storage. Ideal for renewable energy projects, grid stabilization, and emergency backup.

Rail-based mobile energy storage (RMES) is another potential application for Mobile-ESS. RMES can assist the grid with alternative non-connected power transfer to address high-impact resilience issues.

Available in multiple configurations, such as lightweight shelters, hooklift models, mobile hospitals and container-based units, they provide adaptable functionality for both civilian and military use.

Our range of mobile field kitchens consist of either single, autonomous units or several different types of special containers and shelters to offer large capacity field kitchens.
