Launched in 2023, the Gobi Desert project aims to generate a staggering 455 gigawatts (GW) of clean power by 2025. This includes a mix of solar panels and wind turbines deployed across ...

China has achieved a groundbreaking advancement in renewable energy technology with the recent inauguration of the world's first solar-thermal power plant, which employs a dual-tower ...

China's Gobi Desert is home to a groundbreaking solar power station, a world-first design that slashes costs and significantly boosts energy efficiency.

China has made a revolutionary breakthrough in renewable energy engineering after it just launched the world's first solar-thermal power plant that utilizes a dual-tower system to generate...

In a first, China has switched on a solar thermal power station in the Gobi Desert, a project described as a more cost-effective and efficient use of the technology, with the potential to be scaled ...

A groundbreaking solar thermal power plant in Xinjiang's Gobi Desert showcases China's renewable energy ambitions, combining cutting-edge technology with sustainable development goals.

The Gobi Solar Projects leverage the abundant sunlight present in the desert, tapping into the potential for solar farms, which promise to deliver clean energy, reduce reliance on coal, and ...

China launches the world-first dual-tower solar thermal power plant in the Gobi Desert. 27,000 mirrors focus sunlight to heat salt, generating steam for turbine
