Respondents recognized that utility-scale solar energy will play a pivotal role in decarbonizing the grid and that achieving decarbonization goals is crucial for preserving biodiversity throughout the U.S. ...

To explore options for minimizing these impacts, Valley Electric Association (VEA) and US Fish and Wildlife Service worked together to construct a wildlife-friendly solar power generation facility in the ...

A new improved grey wolf optimization algorithm is proposed, which integrates a non-linear convergence factor and a location mutation strategy, to solve the problem of ...

Through a complex biological process, wolves have evolved to capture and convert sunlight into the energy they need for survival. Join me on this enlightening journey as we unveil the ...

You'd expect cybersecurity experts or tech-savvy humans to hack power systems, not grey wolves stealing electricity from solar installations. Yet here we are - in Mongolia's Gobi Desert, ...

This summary reviews publicly available information about the adverse impacts and potential benefits of ground-mounted large scale - PV solar power on wildlife in North America, and the status of our ...

Simulation results demonstrate that WPH has a greater robustness and a faster dynamic optimization than that of conventional approaches, which can increase the utilization rate of the ...

The idea of MAS-SCG originally stems from the group hunting of a wild wolf pack in the harsh environment, which ensures the survival and prosperity of the whole wolf pack via CC, and then wolf ...
