As the demand for solar PV grows globally, China - the world's largest solar PV factory - continues to remain busy rolling out products across the supply chain to meet this demand.

Key to the strong export flow was a steep cut in module prices, which averaged 13.7 cents per megawatt over the first half of 2024, compared to an average of 18 cents/MW for the whole of 2023.

The export value, which includes photovoltaic products such as silicon wafers, cells and modules, reached about \$43 billion during the first 10 months, the China Photovoltaic Industry ...

China exported 5.9 GW of modules to the Middle East in 4Q24, up 42 % YoY from 4.15 GW. In 2024, cumulative shipments to the Middle East reached 28.79 GW, representing a 99% YoY ...

Exports of solar modules from China to the rest of the world have increased 34% year-on-year, growing from 85 GW in the first half of 2022 to 114 GW in the same period this year, which ...

Regarding export market distribution, Europe and Asia are the main export destinations, accounting for 42% and 40% of total exports, respectively. The Netherlands, Brazil, Spain, and India ...

Solar PV products are a significant export for China. In 2021, the value of China's solar PV exports was over USD 30 billion, almost 7% of China's trade surplus over the last five years.
