Why should you use 380 VDC?

Using 380 Vdc reduces the normal operating current by a factor of 7 compared to 48 Vdc - so reducing copper use per kW of load - and greatly increases the flexibility of site designs, with batteries no longer required to be close to the power converters, and the load able to be located 100s of meters away from the power system.

What voltages are available in a 240V 3 phase converter?

240V single phase to 415V three phase converter, 30 hp (25 kW), 1 to 3 phase converter frequency 50Hz/60Hz, input voltage 110V//120V220V/240V/480V is optional, output voltage 220V/280V/400V/440V is available, with LCD display. Other phases and voltages can be customized, directly sold by the manufacturer, cost-effective.

Why should you choose Eltek 380 VDC systems?

Eltek's 380 Vdc systems provide operators with the ability to solve the combined challenges of ever greater power density, varying load types, and increased site flexibility without compromising on performance, cost, or serviceability.
