---

These are precise, computer-aided design drawings (think AutoCAD or similar) that lay out everything for your PV system: panel placement, wiring routes, structural attachments, ...

Installing a photovoltaic (PV) array starts with selecting a suitable mounting structure, which will support the solar panels and place them at an optimal angle to receive ...

This measure guide describes the need to provide an architectural drawing for a future solar photovoltaic installation.

Solar Roof is a building-integrated photovoltaic (BIPV) system that incorporates photovoltaic (PV) tiles as roof coverings to generate on-site electricity for the building.

Learn how to create solar site plans and module layout drawings for roof and ground-mounted systems. Get faster quotes and streamlined permitting. View samples.

In this section, we will go over the procedures involved in drawing the How to Draw a Solar Panel design, beginning with a crude sketch of the panel layout, progressing to producing accurate lines ...

Using AutoCAD's XL line tool along with Copy and Move, we draw grids and arrange solar panels across the rooftop to evaluate how many panels can fit in the available area.

With easy to use selecting tools, start by outlining your roof for your site plan. After defining this area, you can draw obstructions like vents or trees, simply outline areas you either don't want modules.
