It integrates diesel engine drive, self-priming sewage discharge and mobile deployment functions, and is widely used in scenarios such as municipal flood prevention, farmland irrigation, and emergency rescue.

I suspect that your generator is very gummed up and the pricker is stuck in there. You may try to heat it (the generator) up with a propane torch and see if you can get the block out.

To conclude, removing a generator from an engine shaft can be a complex task, but by following the step-by-step guide presented in this blog post, you can achieve it efficiently.

very good video - but I don't know how on earth you were able to deal with the tin screws on both sides of the fan shroud - way down behind the manifolds! I tried and tried - then finally gave ...

From the way it is acting, it sounds as if the generator is not set up properly. In a 3-brush generator, the 3rd brush controls how much "ground" one of the field coils gets.

This video short will show you how to unbond a Firman Generator Tri - Fuel. How to make Firman Generator a Floating Neutral How to remove the bonding neutral wire from Firman...

It's out and on cinder blocks, 4X4 PT's and 2x6's with 1-1/4 " rigid pipe rollers underneath. Didn't need to remove any bolts or rollers, rolled out to the stops, then lifted the front by ...
