The important thing (I think) is to make sure the mounts are strong enough to stand up to your winds, and that the type of construction you use has demonstrated a long life in your area.

First, a stand with adjustable legs can help you position your panels better. Second, make sure any stand you consider has some locking mechanism so that it won't collapse on its own.

Once you've gathered all the tools and followed up on permits and safety requirements, it's time to set up your mounting system. The first step is to attach the fixing bracket to the solar panel.

Let's now look at 10 simple steps that you need to follow, to successfully mount your DIY solar panel energy system in your home. Most solar panel stores set deadlines within which you can ...
