Kosovo's storage revolution won't happen overnight, but the pieces are falling into place. With the right mix of policy support and tech innovation, this could become Europe's next clean energy success story.

The main purpose of the study was to show the potential of renewable hydrogen to be used for energy generation and storage. The author proposed the share of RESs to be around ...

The course covers the main aspects of hydrogen as a utility, and why this is seen as a potential route to meeting our legal requirement of an 80% reduction in carbon emissions by 2050.

That's where Kosovo Energy Storage Group comes in - the unsung hero of modern power grids. With global energy storage projected to grow 13% annually through 2030 [1], Kosovo's strategic position in ...

The lack of global standards and investment uncertainties further impede the development of a comprehensive hydrogen economy. This review evaluates hydrogen's potential as ...

The new publicly owned enterprise "Energy Storage Corporation (ESC)" will operate as a joint-stock company with the Republic of Kosovo as its sole shareholder, and during the 5-year ...

This study sets targets for hydrogen implementation in Kosovo's transport sector, as well as paves the way for further research regarding hydrogen's role in energy system balancing.

Kosovo will be the first country in the Balkan region to invest in a 170 MW battery storage system which will stabilise energy fluctuations by addressing imbalances between supply and ...
