FuturEnergy Ireland is proposing to use an iron-air battery capable of storing energy for up to 100 hours at around one-tenth the cost of lithium ion across the battery energy storage portfolio.

Today's conference heard from a range of stakeholders across the renewable sector, discussing the potential role of energy storage in the Irish energy transition, and the rapidly emerging ...

Ireland is an excellent starting point for RWE Renewables as we look to expand and grow our battery storage technology business and become a key partner in Ireland's low carbon energy transition. ...

While the renewable energy industry urged the Government and grid operator to be more ambitious with the procurement mechanism to reach the original 500 MW target by 2030, policy on ...

Eir Solus develops stand-alone battery storage systems as well as hybrid energy systems that link battery storage with wind and/or solar plants. Batteries are an important building block of the energy ...

Using focus groups and a survey with the renewable energy and storage sector, we document perspectives on the critical barriers, innovative solutions and policy gaps identified by ...

Important to note that the pipeline results demonstrate the capacity in the storage sector and potential build-out. The results are not intended as a prediction as to what may occur. The results help identify ...

Ireland - A Game Changer for Long Duration Energy Storage? This is the first electricity storage policy published in Ireland. The Irish Government's Climate Action Plan 2021 set out the need for an energy ...
