Cumulative installed wind energy capacity including both onshore and offshore wind sources, measured in gigawatts (GW).

The U.S. wind market continued a downward trend in 2024, with 5.2 gigawatts (GW) of total installations, the lowest in 10 years, according to the U.S. Wind Energy Monitor report released ...

The capacity, number in turbines, and funding amounts added in 2023 for small wind deployed in the United States increased compared to previous years. In 2023, 1,994 small wind turbines were ...

The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

In 2024, the total wind power capacity installed worldwide surpassed 1.1 terawatts, growing by more than 100 gigawatts in comparison to the previous year. China is the leading country ...

Thus far, wind power's largest growth in capacity was in 2020, when 16,913 MW of wind power was installed. [7] Following behind it were 2021, during which 13,365 MW were installed, and 2012, which ...

Current installed wind generation capacity in the U.S. is roughly 152 gigawatts (GW), according to the U.S. Energy Information Administration (EIA). That capacity is up 46% from 2019, ...

Installed wind power generating capacity has increased substantially in the United States over the last 25 years, growing from 2.4 gigawatts (GW) in 2000 to 150.1 GW in April 2024.
