-----

While there are technical and geographical constraints for certain technologies, three technologies suitable for implementation in Ireland are battery storage in the short term, pumped storage hydro in ...

As opposed to short duration storage that mainly provides system services, LDES allows for storing and dispatching energy on-demand rather than letting surplus renewable energy go to waste and using ...

Battery energy storage systems, often referred to as Bess, are regarded as a vital part of the Ireland's fledgling renewable energy sector and demand for them has never been higher.

EirGrid launched its consultation on a proposed procurement mechanism & associated operational considerations to facilitate the introduction of LDES in Ireland.

Siemens Energy will provide the technology for a project in Ireland combining a synchronous condenser and a battery energy storage system (BESS) with a capacity of 160MWh.

Energy Storage Ireland urges EirGrid to deliver Ireland's 500 MW storage target by 2030, boosting renewable energy, lowering electricity costs, and improving energy security.

EirGrid, the transmission system operator (TSO) for the Republic of Ireland, has launched a consultation outlining how it will procure its first long-duration energy storage (LDES) capacity.

At Energy Storage Ireland 2025, the message was clear: energy storage is central to a stable, low-carbon grid, and while short-duration battery systems (BESS) are available, long-duration ...
