Building on the experience of other IEA member countries, Greece could improve the scheme and increase energy savings through 2030. As the Greek building stock is older than the EU and IEA ...

Energy storage is widely seen as the missing piece in the puzzle. Without batteries or pumped hydro plants capable of absorbing excess solar output at midday and releasing it during ...

Currently there is a growing interest for investments in storage facilities in Greece. Licensed projects mostly consist of Li-ion battery energy storage systems (BESS), either stand-alone or integrated in ...

Greece is rapidly emerging as a Southeast European energy hub, driven by rising renewables, stronger interconnections, and growing flexibility and grid investments.

A new study by the Center for Liberal Studies (KEFIM), in collaboration with the EPICENTER think tank, highlights the urgent need for investment in energy storage and the ...

The residential energy storage market in Greece has gained traction due to the push for renewable energy integration. Government policies supporting solar energy systems, energy efficiency, and grid ...

While batteries are gaining traction, Greece is also investing in large-scale pumped hydro energy storage. By repurposing decommissioned mining sites, the country is turning industrial scars ...

Energy storage remains a key pillar of Greece's energy transition strategy, essential for managing RES curtailments and strengthening grid flexibility. While early development was driven by ...
