-----

Germany curtailed a record amount of solar and wind power in the first half of the year as grid constraints and insufficient battery storage prevented it from taking full advantage of fresh...

While solar energy has not completely vanished from Germany's energy mix, its prominence has notably diminished in recent years. Continued installations still occur, primarily ...

Solar power accounted for an estimated 10.7% of Germany's electricity in 2022, a remarkable increase from less than 0.1% in 2000. This growth reflects the country's dedication to ...

Germany gets less sun than the entire continental US, and yet almost a fifth of its electrical generation was done by solar power in 2025.

Germany is leaving the fossil-nuclear age behind, paving the way for photovoltaics (PV) to play a central role in a future shaped by sustainable power production. This compilation of current facts, figures and ...

Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale launch of the technology with guaranteed feed-in tariffs in the ...

Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy Sources Act, and ...

In early 2025, Germany reached a significant milestone, achieving an impressive 94.6 GW of total solar capacity, according to updated figures from the Federal Network Agency (BNetzA) ...
