Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals. The Sixth Strategic Energy Plan aims for carbon neutrality ...

Expanding the adoption of domestically produced renewable energies and improving the technology self-sufficiency rate will contribute to strengthening Japan's industrial competitiveness in addition to ...

Japan's plan to achieve 150 GW of solar capacity by 2040 is a significant step toward a sustainable future. By developing large-scale solar plants and optimizing existing facilities, the ...

Japan will target to achieve between 40% and 50% renewable energy share in its total electricity mix by FY2040 under its 7th Strategic Energy Plan that has been approved by the cabinet. ...

Its 7th Strategic Energy Plan, released in February 2025, projects solar to rise from its current 10% share of electricity generation to between 23% and 29% by 2040, more than any other ...

Japan's government is considering ending support for new major solar-power generation projects from fiscal 2027. This comes amid growing concerns about the impact such plants have on ...

Japan wants renewable energy to account for up to 50% of its electricity mix by fiscal year 2040 with nuclear power taking up another 20%, according to a draft of its revised basic energy ...

Renewable energy is projected to account for 40-50% of Japan's power generation by 2040, which would surpass thermal power as the largest power source. Specific goals include ...
