o Heating capacity from renewable sources and solar thermal storage: 50 MW o Additional buildings connected to the district heating network: approx. 8.600 new connections o Annual greenhouse gas ...

Up to 38,000 residents will directly benefit from being connected to Pristina's district heating system as part of the network expansion measures. The EU co-funds the investments under Flagship 4 - ...

It will contribute to significantly reducing greenhouse gas emissions and pave the way for further investment. The project therefore sets an important milestone for more green electricity in Kosovo's ...

It provides an overview of renewable energy (solar and biomass) technologies appropriate for Kosovo greenhouse operators and also provides an assessment of the potential for using hydroponic ...

Kosovo* will host the first large-scale solar thermal system for heating homes and commercial space in the Western Balkans region. So far there is just one similar project, in Serbia, but its solar capacity ...

The Project hypothesis is that if technologies for reducing energy costs, reducing natural resource use (energy/water) and improving energy reliability in greenhouse production in Kosovo are better ...

Kosovo* is developing the Western Balkans' largest solar thermal district heating project, supplying 32,000 citizens with renewable heat while expanding its network with coal plant cogeneration.

Known as Solar4Kosovo, this new solar plant is a key component of the EU's strategy to help Kosovo expand its renewable energy capacity and reduce its reliance on coal power.
