The Drawdown Georgia research team estimates that Georgia could reduce emissions by one megaton (Mt) of CO<sub>2</sub>e by adding ten new 100-MW utility-scale solar installations and 36 new 5-MW ...

Utility-scale solar is defined as any ground mounted solar panel facility that has a capacity rating larger than 5 MW. Community-scale solar generally has a capacity of 0.5-5MW. This solution can be ...

Georgia is home to some of the largest solar farms in the Southeast. These large-scale solar installations help power local communities, reduce carbon emissions, and contribute to ...

We have constructed and are operating 16 solar farms and additional demo facilities across the state of Georgia, many in partnership with military installations. The largest, at 128 MW of capacity, is located ...

To meet this challenge, Georgia is leveraging its abundant sunshine and available land to develop large-scale solar projects, making solar power a central pillar of its energy future. One of the ...

"The model that Silicon Ranch has implemented here, where large flocks of sheep are managing the land and vegetation under the solar panels, is the future of responsible solar development in the US, ...

Here is a map of all utility-scale solar projects in Georgia. Hover over a solar project to view information on each project like their name, capacity and construction date.

Five utility-scale solar farms totaling 1,068 MW will be built across Georgia, boosting clean energy for the state.
