ERICO® has complete telecommunications applications solu-tions to help protect the facility against electrical noise, lightning induced surges and transients caused by switching components in the ...

The purpose of this Recommendation is to give detailed guidance on protection procedures, so that an engineer who is not a lightning protection expert can accomplish the design of the lightning ...

Use best protection practices for lightning protection as described in this document including the use of single point ground, ac surge protection, and surge protection on wire-line ...

While until a few years ago, battery systems of telecom installations used large lead acid cells, nowadays, lithium-based batteries are the technology of choice for telco applications. [pdf]

This paper is entitled "Case Histories in Lightning Protection - Communications Facilities," and was written by David Brender, P.E., Copper Development Association, Inc.

In this paper, the performance of a lightning protection system (LPS) on a grid-connected photovoltaic (PV) park is studied by simulating different scenarios with the use of an appropriate software tool.

In base station lightning protection design, the grounding grid and ground busbars are key components. With proper design, they can effectively reduce the impact of lightning on the station.

In this article, we break down the key requirements of the industry standard YD5068-98 - Code for Design of Lightning Protection and Grounding of Mobile Communication Base Stations, and explain ...
