Between 2025 and 2027, the company plans to build 12 new solar sites - including these four - adding an additional 900 megawatts of energy to the electric grid.

Strong demand for new energy supply and rising power prices strengthen the market fundamentals for new solar projects in the long term. Overall, our low case is 18% lower than our ...

In 2025, the U.S. will add a record 63 gigawatts of new power capacity, with 93% coming from carbon-free sources. Solar and batteries will dominate the market, while natural gas faces a ...

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

FirmoGraphs is tracking more than 100 very large solar projects starting construction in 2023 with a total estimated value of nearly \$40 billion.

The US Energy Information Administration expects 63 GW of new utility-scale electric-generating capacity to be added to the USA's power grid in 2025, according to its latest "Preliminary ...

Solar continues to be the main fuel type for new additions, with over 30,000 MW of solar energy added in 2024, nearly double the amount added in 2023. This report also analyzes prospective generation ...
