Why are China's power outages so serious?

The country has in the past struggled to balance electricity supplies with demand, which has often left many of China's provinces at risk of power outages. During times of peak power consumption in the summer and winter the problem becomes particularly acute. But this year a number of factors have come together to make the issue especially serious.

Where are the power outages in China?

The state-run Global Times newspaper said there had been outages in four provinces - Guangdong in the south and Heilongjiang, Jilin and Liaoning in the north east. There are also reports of power cuts in other parts of the country.

What causes China's power crisis?

China's power crisis China is used to seeing power supply cuts in parts of the country each year, but their frequency has increased sharply since the second half of 2020, escalating to a crisis in September 2021. Potential causes include Beijing-dictated carbon reduction targets to lower emissions, and an urgent shortage of coal. **SHOW FULL PROFILE**

Are blackouts affecting China's Electricity Supply?

Blackouts are not that unusual in the country but this year a number of factors have contributed to a perfect storm for electricity suppliers. The problem is particularly serious in China's north eastern industrial hubs as winter approaches - and is something that could have implications for the rest of the world.
