MANILA, Philippines -- The Department of Energy (DOE) is eyeing to implement a package worth up to \$300 million to support the rollout of rooftop solar systems and other energy ...

Summary: Discover how containerized energy storage systems are revolutionizing power solutions in Cebu, Philippines. This guide explores technical standards, industry applications, and why EK ...

By introducing solar battery storage containers, schools can store excess electricity during low demand periods and release it during peak demand periods, thereby balancing supply ...

The National Electrification Administration (NEA) on Wednesday entered into a partnership with the Department of Education (DepEd) for the installation of solar photovoltaic (PV) ...

Designed for rapid deployment, the Mobile Energy System is a solar-powered, trailer mounted unit equipped with battery storage and a hybrid on-grid/off-grid inverter.

While other countries in East Asia and Southeast Asia already achieved universal access, the Philippines still faces challenges in completing the electrification of schools.

These systems will enhance the AFP's ability to respond quickly to disasters, secure critical missions, and maintain energy availability in remote or high-risk areas. Three MES units were ...

Our solutions include container classrooms with wind-resistant designs, solar power systems, and battery storage for continuous energy access. We also offer mobile solar classrooms for remote ...
