-----

The E3 error is battery under voltage. So it sounds like the SCC requires higher voltage to start charging and stop complaining.

In this guide, we're going to demystify the most common culprits, especially the infamous Error 3, and turn you from a panicked user into a confident troubleshooter.

The most common causes include aging batteries, a malfunctioning solar panel, or a problem with the charging circuit. To resolve this error, you should check the battery's condition, ...

Find out what solar charge controller error codes mean and how to resolve them for MPPT and PWM systems.

Don't rely on AI for reliable answers. It's possible that the draw on the battery is higher than the solar panel is charging it. So you would have net discharge. You'll have to check the input ...

Keep getting Error 3 on system when I use over 1000 watts on Line 2. I have shore power 240V AC 50 amp. Power runs through 2 Multiplus 3000 inverters. One for each leg of the 240V AC. Three x 300 ...

If the open circuit voltage and short circuit current of each solar panel are normal, it is recommended to check the charging status of the controller and the battery capacity.

Today I notice my charge controller has an E3 error code showing 28 % battery. It has been june gloom where I am at but I just don't know if there is something I need to do?
