Integrated solar street lights, as the name suggests, integrate the solar panel, battery, controller, LED light source, and other components into a single fixture.

Semi-Integrated Design: In a semi-integrated solar street light, the solar panel works independently from the light fixture, while the battery and controller are seamlessly housed within the light.

A split-type solar street light takes a conventional design, whereas an integrated solar street light is self-contained system that incorporates the photovoltaic module, light engine, battery bank, charge ...

Flaretech Semi-Integrated Solar Street Light Series is designed to have a separate solar panel for maximum charging efficiency. This provides panel flexibility as it can easily be adjusted to receive the ...

The PV7 series of semi integrated solar street lights have become an innovative and sustainable solution for public space lighting. Semi integrated solar street lights are easy to install, even in places ...

Our semi-integrated solar lights combine advanced solar technology with reliable, in-built battery systems, making them ideal for use in government projects, NGOs, CSR initiatives, and OEM services.

Semi-integrated solar street lights are a hybrid design where the solar panel is mounted separately from the light fixture, but both the LED light and the battery are housed together in a single unit.

Ultrathon manufactures a wide range of Solar LED Street light luminaries as well as complete systems with inbuilt solar charge controller auto dusk to dawn operation.
