What is China's most powerful floating wind turbine?

In a bold leap forward for sustainable energy, China has unveiled the "Qihang," the world's most powerful floating wind turbine. Developed by the China Railway Construction Corporation (CRRC), this 20-megawatt giant is more than a technological marvel--it's a declaration of leadership in the global race toward clean energy.

How big is China's 'Qihang' wind turbine?

While China's Mingyang Wind Power is working on a 22 MW turbine expected later this year, the "Qihang" currently leads in size and capability. After successful testing and certification, the turbine will be deployed in deep-sea areas for grid-connected power generation.

Where is Qihang wind turbine made?

The turbine named "Qihang" is a 20MW floating offshore wind turbine, independently designed by CRRC. It was manufactured in Sheyang, Jiangsu, and rolled off the production line in October 2024.

What is a Qihang wind turbine?

Qihang stands as a monumental achievement in renewable energy technology. Developed by China Railway Construction Corporation (CRRC), this floating wind turbine boasts a rotor diameter of an impressive 853 feet, roughly the size of seven football fields.

In a significant move towards a more sustainable future, China has unveiled its latest innovation in renewable energy--Qihang, the world's largest floating wind turbine. This 20 MW ...

On January 11, "Qihang," the world's most powerful floating offshore wind turbine, was successfully installed in Dongying, Shandong, marking a significant milestone for CRRC in the ...

This report is your guide to identifying lucrative opportunities within the Inner Mongolia Siziwang Qi Wind Farm, showcasing your offerings, and boosting your chances of securing valuable ...

The launch of the Qihang cements China's position as the world's offshore wind powerhouse. The country has already overtaken the UK in total offshore wind capacity and shows no ...

The turbine named "Qihang" is a 20MW floating offshore wind turbine, independently designed by CRRC. It was manufactured in Sheyang, Jiangsu, and rolled off the production line in ...

In a groundbreaking move towards sustainable energy, China has launched the world's largest floating wind turbine, the "Qihang," which promises to significantly reduce carbon emissions ...

Named "Qihang," this 20 MW floating offshore wind turbine was independently developed by China Railway Construction Corporation (CRRC). The unit was completed at the production ...

As the world's most powerful floating offshore wind turbine, Qihang is expected to break the geographical limitations and extend wind power generation to even broader deep blue seas.
