The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear power. More than 30 countries now have a share of wind ...

Wind electricity generation, billion kilowatthours, 2022: The average for 2022 based on 189 countries was 11.16 billion kilowatthours. The highest value was in China: 762.67 billion kilowatthours and the ...

In 2024, the globe is witnessing a surge in the number of countries ramping up their wind power statistics. Lets dive into the cr&#232;me de la cr&#232;me of wind energy, exploring the top wind energy ...

Wind power is used on a commercial basis in more than half of all the ...

The United States is the second-largest producer of wind power, and generated 341.40 TWh of wind power in 2021, equal to just over 21% of total global production. Together, China and the United ...

About this data Share of electricity generated by wind power Measured as a percentage of total electricity produced in the country or region.

Below, we show the world's leading countries in wind power capacity in 2024: With nearly 522,000 MW of wind turbine capacity, China by far is the global leader. Even more ...

Leading countries in wind power generation worldwide in 2024 (in terawatt hours) [Graph].
