In 2025, we expect 7.7 GW of wind capacity to be added to the U.S. grid. Last year, only 5.1 GW was added, the smallest wind capacity addition since 2014. Texas, Wyoming, and Massachusetts will ...

This report was created using Cleanview's renewable energy tracking platform, which provides comprehensive monitoring of clean energy projects across the United States.

The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this ...

ACP highlighted several data points in its report. The group said developers added more than 11 GW of new utility-scale solar, storage, and wind power capacity in the second quarter, 91% ...

Texas, California and other states continue setting wind, solar and battery storage records as utilities embrace cheaper, faster-to-build renewable sources.

Solar and battery storage continue to set installation records, while wind energy has plateaued. Solar surpassed 2023's record installations in 2024, adding an estimated 39.6 gigawatts ...

The American Clean Power Association (ACP) is the leading voice of today's multi-tech clean energy industry, representing energy storage, wind, utility-scale solar, and transmission ...

Electrical Energy Storage (EES) systems store electricity and convert it back to electrical energy when needed. 1 Batteries are one of the most common forms of electrical energy storage.
