-----

In addition, several states have adopted solar multipliers, either in lieu of or in combination with set-asides, which allow generation from solar projects to receive extra credit towards meeting ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Distributed solar energy can be located on rooftops or ground-mounted, and is typically connected to the local utility distribution grid. There are a wide variety of policies at the federal, state and local level ...

This page describes the patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact project development.

With a robust existing wind industry and the state's first utility-scale solar projects coming online, West Virginia is well positioned to diversify and strengthen its energy sector in the 21st Century.

Local governments have many tools at their disposal to influence solar energy development. At the same time, decisions made at the federal and state levels set the context for ...

An overview of Clean Energy and Renewable Portfolio Standards across 50 U.S. States, with state-by-state policy progress, key resources, and model rules.

The regulatory landscape governing solar power generation is an intricate tapestry of local, state, and federal policies designed to facilitate the growth of this vital renewable energy sector.
