SK On (Seoul, South Korea) has recently unveiled its latest research and development (R& D) achievements on all-solid-state batteries (ASSBs) as the company reinforces its commitment ...

A South Korean battery project with the potential to improve electric vehicle performance is ahead of schedule and set for commercial production by 2029, according to a news release. SK ...

Scientists in South Korea have discovered a way to make all-solid-state batteries safer and more powerful using inexpensive materials.

SK On is moving faster than expected toward commercializing next-generation all-solid-state electric vehicle batteries by 2029, with its pilot line in Daejeon set to begin operation before...

Korean researchers have developed a new technology that could overcome the limitations of solid-state batteries, which have attracted attention as explosion-free and fire-free batteries but ...

After opening the first-of-its-kind pilot plant for its all-solid-state EV batteries this week, SK On said it plans to bring the breakthrough battery tech to market ahead of schedule.

SK On has taken a significant step toward bringing next-generation battery technology to market with the opening of its all-solid-state battery (ASSB) pilot plant in Daejeon, South Korea.

South Korea has picked seven projects from AI computing to all-solid-state batteries as the first recipients of capital from its 150 trillion won (\$102 billion
