US energy officials are reassessing the risk posed by Chinese-made devices that play a critical role in renewable energy infrastructure after unexplained communication equipment was found...

Energy Security: US experts uncover hidden communication tools in Chinese inverters, raising alarm over grid vulnerabilities and foreign control risks.

Over the past nine months, U.S. experts have identified these undocumented devices in solar power inverters and batteries from multiple Chinese suppliers during detailed security ...

Undocumented embedded devices have been found in Chinese inverters and batteries connected to power grids, raising growing concerns among US energy ...

Power inverters, which are predominantly produced in China, are used throughout the world to connect solar panels and wind turbines to electricity grids.

U.S. energy officials have launched an investigation after discovering unauthorized communication equipment embedded within Chinese-manufactured solar power inverters connected ...

While maximizing power transfer remains a top priority, utility grid stability is now widely acknowledged to benefit from several auxiliary services that grid-connected PV inverters may offer.

The investigation began when U.S. experts conducting routine security assessments started stripping down Chinese solar power inverters connected to electrical grids. What they found ...
