But hold onto your solar panels: this Central European nation is rolling out one of the most ambitious energy storage project portfolios for 2025, aiming to become a regional hub for renewable integration.

Echogen, a pioneer in supercritical carbon dioxide (sCO₂)-based PTES technology, is collaborating with Westinghouse to deploy long duration energy storage (LDES) solutions worldwide.

The Slovakian project will be the first of its kind in Europe, delivering gigawatt-hour-scale energy storage capacity to capture surplus electricity from VVB's hydropower stations and dispatch it ...

But did you know Slovakia's capital is now charging ahead (pun intended) with Europe's most ambitious large-scale energy storage project? Let's unpack this energy marvel that's making utility companies ...

Slovakia is planning Europe's first grid-scale pumped thermal energy storage (PTES) project powered by the technology of our member Echogen Power Systems. ?? The facility is expected to...

The project will provide valuable lessons for the wider European energy system and could allow a significant amount of balancing energy to be exchanged across borders, for example ...

By enabling flexible, scalable energy storage, we are proud to support ENGIE's multi-phase project and help Slovakia accelerate its path to a sustainable energy future."

With renewable energy capacity growing 18% annually since 2020, Slovakia faces a critical challenge: how to balance intermittent solar/wind power with grid stability [1]. Energy storage batteries have ...
