They will first arrange the entire zone, equipping it with high-tech equipment, and then establish an independent company for the production of salad plants, which will also be the tenant of ...

Transform your greenhouse into a self-sustaining ecosystem with cutting-edge solar-powered agriculture technology. Modern greenhouse solar kits combine photovoltaic panels, ...

The Recovery and Resilience Plan addresses a number of challenges facing renewable energy producers and consumers in Slovenia. The objectives of the component "Renewable energy and ...

Production will start in 2026. The GreenGardens project was presented on June 27 in Dobrovnik, where the partners intend to build greenhouses on 22 hectares to produce vegetables ...

This cost reduction is largely due to innovations in production and the use of advanced solar panel manufacturing machines. The quality and longevity of these installations also depend ...

Slovenia's solar success story shows that smart engineering can overcome geographical limitations. As panel costs drop 8% annually and efficiencies rise, expect more nations to follow this alpine model.

The greenhouse adopts steel skeleton and is covered with solar photovoltaic modules, while ensuring the lighting demand of solar photovoltaic power generation and crops in the whole greenhouse.

The project will cover 22 hectares and focus on sustainable vegetable production using renewable energy, including geothermal and solar sources. The facility aims to boost Slovenia's self ...
