Tracking (MPPT) Algorithm must be mounted between the solar cells and battery to extract the largest amount of power from the photovoltaic (PV) devices during the flight.

The project aims to modify a 2-metre wingspan remote-controlled (RC) UAV available in the consumer market to be powered by a combination of solar and battery-stored power.

This review paper summarizes modern battery-based power systems for use in the design of unmanned aerial vehicles (UAVs) to increase operational efficiency, extend endurance, operational reliability, ...

In this context, we propose a solar-powered hybrid MAV configuration, named "Solar Swifter" that combines the performance of a quadcopter, allowing vertical take-off and landing (VTOL), with the ...

Solar-powered unmanned aerial vehicles (SUAVs) are likely to become dominant in the near future. They have the advantage of low cost and safe operation features that mitigate the ...

The paper aims to develop a system model that can use the abundant form of sunlight to power an unmanned aerial vehicle. This paper describes a theoretical model that switches between battery ...

This paper comprehensively reviews renewable power systems for unmanned aerial vehicles (UAVs), including batteries, fuel cells, solar photovoltaic cells, and hybrid configurations, ...

In this project, we propose to investigate the development of a battery-free UAV that can survive in the air and sustain long-term missions by harvesting solar energy, eliminating the need for...
