How do I install a SolarEdge inverter?

This symbol is also used in this manual. A SolarEdge inverter may be installed in a site with a generator. SolarEdge requires installing a physical or electronic interlock, which will signal to the inverter when the grid has been disconnected. Interlock procurement, installation, maintenance and support are the responsibility of the installer.

How long should a SolarEdge inverter cable be?

Refer to the SolarEdge Site Designer for string length verification. The total cable length of the string (including power optimizers' cables) should not exceed 1000ft./300m from DC+ to DC- of the inverter. Use at least 11 AWG/ 4 mm² DC cables. 1Not applicable to smart modules. meanings from those in traditional systems.

Do I need a serial number for my SolarEdge inverter?

Provide the serial number when contacting SolarEdge support. The serial number is also required when opening a new site in the SolarEdge monitoring portal. In the following sections, unless otherwise indicated, instructions apply to both single-phase and three-phase inverters, though only one graphical example may be presented.

SolarEdge inverters can be installed at a minimum distance of 50 m/ 164 ft from the shoreline of an ocean or other saline environment, as long as there are no direct salt water splashes on the inverter.

The SolarEdge inverter efficiently converts DC power from the modules into AC power that can be fed into the main AC service of the site and from there to the grid.
