A significant policy shift from Beijing is sending shockwaves through the global solar supply chain, and its effects are being felt acutely in Southeast Asia. China has officially announced the ...

China will eliminate value-added tax (VAT) export rebates for photovoltaic (PV) products beginning in April 2026 and phase them out for batteries by 2027, in a significant policy shift aimed at ...

China's solar ambitions are emblematic of its broader race toward a green energy future, driven in part by Beijing's interest in becoming less reliant on imported oil and natural gas.

Chinese solar stocks rose sharply after authorities unveiled plans to cancel export tax rebates on some solar products, a sector that has faced severe overcapacity, while battery stocks fell...

BEIJING, 10 February 2025 - In a move to reshape the global renewable energy landscape, China announced that it will reduce subsidies for wind and solar projects after achieving its clean energy ...

China's top economic planning agency said on Sunday it was taking steps to scale back subsidies for renewable energy projects after a boom in solar and wind power installations.

China will cancel solar export tax rebates from April 2026 and phase out battery rebates by 2027, increasing costs and accelerating early shipments.

The reduction in subsidies could place additional strain on China's solar industry, which is already grappling with overcapacity and plummeting panel prices that threaten the viability of smaller ...
