The flares are coming from a solar region that was created in late January.

Federal agencies are delaying approvals for renewable energy projects on both federal land and private property at a time when electricity demand is going up.

To develop this report, we pulled data for all properties in Portfolio Manager that reported any onsite solar or onsite wind generation and use as of the end of 2019.

Site conditions: Even with adequate space, site conditions can impede onsite solar. The structural integrity of roofing, the state of the existing electrical infrastructure, and environmental conditions can ...

Solar panels are used to power everything from calculators to sports stadiums to satellites -- and they can just as easily be used to power a home. You don't need to be a rocket scientist - or anything ...

Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

Where mitigation is not feasible, the permitting authority can deny the application or issue a Statement of Overriding Considerations that allows permitting despite the remaining impacts.

Solar PV arrays, wind turbines, and other renewable energy systems can be expensive to install, and the return on investment may not be realized for several years.
