-----

In 2024, Austria achieved another year of record photovoltaic (PV) deployment, adding 2.51 GW of new capacity and bringing cumulative installations to 9.4 GW (DC). PV generation reached approximately ...

Austria aims to achieve a 100% renewable electricity production by 2030 with 1,000,000 homes having solar panels fitted by that date. 11 TWh of extra photovoltaics will be needed above 2021 levels.

In Austria, electricity generation from renewable sources is shaped by a liberalised market model with regulated grid access. The main players include private and public utilities, ...

Renewable energies are the economic engine of the future worldwide. Here you can find selected data on Austria's renewable energy sector.

Electricity generation from solar, measured in terawatt-hours.

More than three-quarters of Austria's electricity comes from low-carbon sources, with hydropower being the largest contributor at more than half of the total consumption. Wind energy contributes almost ...

Sonja Wogrin: Austria's electricity consumption will rise sharply by 2040 and may almost double. Depending on the electricity demand in 2030 and available demand-side flexibilities and ...

The huge expansion in renewable generation over the next few years will pose the next major challenge for Austria's electricity sector - the system will become more decentralised, with numerous small ...
