The Vogtle nuclear plant in Waynesboro, Georgia, is the nation's largest nuclear power plant, with four reactors totaling a combined generating capacity of 4,500 megawatts (MW).

Georgia has the potential to host up to 87 GW of solar power capacity, according to a recent study by the Georgia Institute of Technology. This capacity could generate around 150 TWh of ...

Learn what types of projects are being proposed, where, and how long they take to get approved.

Here is a map of all utility-scale solar farms in Georgia. Hover over a solar farm to view information on each project like their name, capacity and construction date.

View all Georgia Power plants including solar, nuclear, hydro, coal, and natural gas facilities generating power across the state.

From home installation or buy back programs, to workplace solutions or non-installation options, our goal is to make solar an option for every Georgia Power customer.

Five utility-scale solar farms totaling 1,068 MW will be built across Georgia, boosting clean energy for the state.

Five solar power plants are set to be connected to the national energy grid for the first time in Georgia's history, marking a historic step for the country's renewable energy development.
