What is a microgrid design?

Microgrid designs that consider heating, cooling, transportation, resilience, interconnected systems, and high contributions from renewable energy. DOE's microgrids for critical infrastructure research has centered on microgrid design and analysis tools. These design resources provide reliable cost and resilience estimates of

What is a microgrid assessment process?

The process provides an overview of the basic steps and high-level information as well as analysis that is required for microgrid assessment. It is not intended to capture every detail of a project but rather to provide a general overview.

What can we learn from microgrid project Procurement & implementation?

Lessons learned from microgrid project procurement and implementation. The goal of this report is to outline a process to improve the quality, reduce the cost, and increase the speed and scale of DoD's energy resiliency infrastructure investments. Figure ES-1.

What experience do you need for a microgrid project?

Microgrid project experience is essential, but experience with cybersecurity, government projects, and system integration are also very important. 25 Miramar subsequently received a grant from the California Energy Commission to include energy storage in the overall project.

This guide is meant to assist communities - from residents to energy experts to decision makers - in developing a conceptual microgrid design that meets site-specific energy resilience goals.

This report covers the networked microgrid program efforts which were led by the Pacific Northwest National Laboratory (PNNL) in fiscal year (FY) 18 and 19 as part of the DOE microgrid program ...

This report provides (1) an overview of the microgrid planning, assessment, and design process for DoD installations and (2) is a resource for energy managers, policymakers, contractors, and other ...

This report documents the important steps and outcomes of the Microgrid Fast Charging Station (MFCS) Design Platform project, executed by Xendee Corporation and tested and validated by Idaho ...

While DOE has made significant progress in supporting microgrid deployments, there remain research gaps for both remote microgrid, and microgrids for critical infrastructure, which are being addressed ...
